determine where the function $h(z)=6+40z^3-5z^4-4z^5$ is increasing and decreasing

$$h'(z)=120z^2-20z^3-20z^4$$
$$h'(z)=z^2(120-20z-20z^2)$$
$$h'(z)=z^2(-20z^2-20z+120)$$
$$z=-3, z=2, z=0$$

$$h'(0.01)=+$$
$$h'(-0.01)=+$$

$$h'(-3.01)=-$$
$$h'(-2.98)=+$$

$$h'(2.01)=-$$
$$h'(1.98)=+$$

decreasing → $(-\infty,3)\cup(2,\infty)$
increasing → $(-3,2)$
