determine where the function $R(x)=(x+1)(x-2)^2$ is increasing and decreasing

$$R(x)=(x+1)(x-2)(x-2)$$
$$(x+1)(x^2-4x+4)$$
$$x^3-4x^2+4x+x^2-4x+4$$
$$x^3-3x^2+4$$

$$R'(x)=3x^2-6x$$
$$R'(x)=3x(x-2)$$
$$x=0, x=2$$

$$0.01=-$$
$$-0.01=+$$
$$2.01=+$$
$$1.98=-$$

increasing → $(-\infty,0)\cup(2,\infty)$
decreasing → $(0,2)$
